

Product Design

Asked by : Netflix

Problem Statement : Design Netflix for senior citizens ?

Clarifying Questions :

WHO

Q1 : By senior citizen, do we mean people above the age of 60 ?

Ans : Yes

Q2 : For both the genders of senior citizens ?

Ans : Yes

WHAT

Q3 : What are we trying to solve here ?

Ans : Senior citizens are not able to use Netflix and their activity is very low.

Q4 : What is the goal of this ?

Ans : To increase the average engagement time.

Q5 : Do we have to also consider any disability like eyesight ?

Ans : Yes

WHY

Q6 : Any specific reasons why they are not able to engage with Netflix ?

Ans : Its for you to identify

WHERE

Q7 : This will be for app or website or both ?

Ans : Do it for both.

Q8 : Where are we planning to launch it ?

Ans : India

Q9 : Any specific place in India ?

Ans : Its upto you.

WHEN

Q10 : When are we planning to launch it ?

Ans : No time constraints as of now.

User Types :

1. Senior citizens - Primary users
2. House help or family members - Secondary users (old people might need help of them)

User Journey

Searches App on Netflix → Installs → Signs Up → Payment on Website → Content Discovery → Clicks on a content to watch → Reads video details → Plays Video → Enables Subtitles or Removes it → Comes back again and watches again.

Lets identify the pain points during each journey.

1. Searches App and Installation remains the same from Playstore or Appstore.
2. Signs Up - Senior citizen will not have email ids.
3. Payment on Website - Payment will require some assistance, as they will not be knowing on how to make payment and setup autopay.
4. Content Discovery
 - a. Gets overwhelmed because of lot of content, not able to decide what to watch.
 - b. Do not like the content posted on Netflix.
5. Navigating on the app
 - a. They find it difficult to move through the app. (for example - language change, from where to get the subtitles.
 - b. Not able to find movies of their favorite actor or actress.
6. Video Details - Not able to read through details, as their eyesight is weak.

Solutions -

1. SignUp Journey -

- Ask to opt whether the person is senior citizen or not to start the new signup flow.
- Enable mobile number and OTP based login.
- Ask user to select the language at the start.

2. Payments - These are a bit complicated things, this will require assistance from family members.

3. Content Discovery -

- Voice enabled search.
- Content for senior citizens like Old movies, serials etc.

4. Navigating through the App -

- Voice enabled Navigation for example - "Search Dilwale Dulhaniya Le Jayenge" or "Change Subtitles to Hindi"
- Enable search based on actors or actresses.

5. Video Details -

- Bigger fonts so that old people can read.

Prioritizing Solutions:

Solutions	Reach (out of 5)	Impact (out of 5)	Confidence	Effort (out of 5)	Total Score
OTP Based login	5	5	100%	2	12.5
Language Selection	5	5	100%	2	12.5
Voice enabled search	3	4	100%	4	3
Voice enabled navigation	3	4	100%	2	3
Content for senior citizens	3	4	80%	5	2.4
Search based on actor/actress	4	4	100%	2	8

Bigger Fonts	3	3	100%	1	9
--------------	---	---	------	---	---

By the RICE framework, we have prioritized the solutions :

1. OTP Based Login - Must Have
2. Language Selection - Must Have
3. Voice Enabled Search and Navigation - Should Have
4. Search Based on Actors/Actresses - Could Have/Good to Have
5. Bigger Fonts - Could Have/Good to Have
6. Content for Senior Citizens - Could Have

We will be moving forward with - OTP Based login. Language Selection, Voice enabled search and navigation and Bigger Fonts

Metrics:

Acquisition Metric - # of people signing up through new journey.

Activation Metric - # of people who used the voice enabled search.

Satisfaction Metric - NPS score

Revenue Metric -

- % increase in revenue from senior citizens.

Engagement Metric - # of videos watched in a week/month

North Star Metric - % increase in average session time.
